

735-2 - Scientific Thermometer Overview

The Testo 735-2 scientific thermometer is used in a wide variety of different fields. This hardly comes as a surprise considering it can measure the surface, air and core temperature. With an accuracy up to 0.05 °C using high-precision Pt immersion/ penetration sensors.

Features

- 3 measurements can be carried out simultaneously
- 99 sites can be stored in the instrument
- Memory for up to 10,000 readings
- Displays, saves and prints Delta T, min, max and mean values
