

## **905-T2 - Surface Thermometer Overview**

The Testo 905-T2 surface thermometer provides you with the best piece of equipment for dealing with temperature measurements on both smooth and uneven surfaces. This is because its temperature probe (type K thermocouple) features a measuring head with sprung thermocouple strip that adjusts to the surface. This method prevents the temperature probe from tilting - and therefore false measurement results.

### **Features**

- Sprung thermocouple cross-band adapts to any surface
- Up to 500°C of Surface temperature can be measured
- Easy readout of readings due to rotatable display
- Auto-Off function
